ID	Theme	User Story	Notes	Priority	Status		Task	User Story ID
1	Concept	As an user, I want to have specifically formulated questions that indicate what this program will be able to answer, so that I can get a relative idea of what the capabilities of this program are.	Questions are to be taken from the user's perspective. "How many parking meters are there in Rotterdam?" indicates that the program is able to answer this question.	M	ND		- Make 5 questions (ND) - Choose a topic (D)	1
2	Data	As a developer, I want to have verified data sources such as government-issued spreadsheets, so that I can create an application that can read this data and present it to users without having to question the credibility of the source	use sources such as http://rotterdamopendata.nl/dataset	M	ND		- Find at least 2 datasources (D)	2
3	Structure	As a developer, I want to have a conceptual data model, so that I can use this as a reference when building the physical data model.		M	ND		- Design general concept of the application (ND) - Create an ERD (ND)	3
4	Data	As a developer, I want to have a data parser, so that I can turn spreadsheets into SQL queries without doing everything manually.	a parser reads a spreadsheet's raw text, and in turns converts that to proper SQL queries	S	ND		-Find out how to read raw spreadsheet text -Turn the text into proper SQL queries	4
5	GUI	As a user, I want to be able to see the requested information on a map, so it's easier to get the information that I want.	Database contains GPS coordinates, use these to display everything accurately (see Google Maps)	M	ND		-Figure out how to display info on a map -Draw relevant info on the map	5
6	GUI	As a user, I want to be able to navigate through the map by moving it around, constantly having the data updated so that the map stays clean.		M	ND		-Make the map draggable -Make displayed info move along with the map	6
7	GUI	As a user I want to be able to enter a location and have the program pan to that specific location.		S	ND		-Make the map pan to a given area	7
8	Data	As a developer I want all relevant information inside a database, so it's easier to fetch the required data.		M	ND		-Put all relevant info inside a database	8
9	GUI	As a user I want to be able to select the info that I want to see from a menu, instead of getting every possible thing thrown at me at once, so that I have a clear view of what I want to see.		S	ND		-Make a selection menu -Hide/display certain blips based on what's selected	9
10		As a user I want to let the application use my current location so that I can immediately see what's going on in my neighborhood		C	ND		-Retrieve a user's current gps location -Make the map pan to this location	10
11		As a user I want to be able to save an instance of the map as a file, so that I can look at it later without having to open the program		C	ND		-Add save functionality	11
12		As a user I want to be able to print out the map, so that I can use this information while I'm not behind my computer		W	ND		-Add a print function (actual printer, not console)	12

-Taakverdeling op Trello = zorg dat iedereen altijd ergens mee bezig is!   -"Alle taken zijn specifiek (-Gwen op classroom) betekent dit max. 1 persoon per taak of betekent dit dat je geen 2 taken voor hetzelfde probleem mag hebben? Hoe werkt dat als we nu maar 5 taken hebben?
